INTERESTS

I work on data-efficient and compute-efficient machine learning algorithms and their application for neuroscience. I have extensive experience in deep learning, Gaussian Processes, generative models, and physical simulation. I have co-developed open-source projects that are used daily in science and industry. I have been deeply involved in the PyTorch Lightning community, was selected as Lightning AI Academic Ambassador, and as the featured developer for Lightning's first DevCon. The goal of my work is to shed new light on classical machine learning algorithms, develop new ones, and deploy them at scale for neuroscience.
